

Sedation & Relaxation

As a caring practice we understand that not all people are comfortable about receiving the dental care they require.

In our practice we strive to provide a friendly, relaxed and comfortable atmosphere to ensure the dental experience for all our patients is a pleasant one.

For the more anxious patient who require additional assistance, intravenous sedation is offered. This safe and predictable technique makes even the most demanding treatments accessible to some of the most anxious patients.

**Don't dare think you're
too frightened to visit
the dentist ever again**

Melt those fears away!

In the 21st century it is upsetting to think that some patients are suffering through lack of dental treatment just because they are scared. At HDIC we can sedate you with a small scratch in the back of the hand or arm and your anxieties simply melt away in seconds.

Sedation is not a general anaesthetic, you are conscious but you really could not care what happens and what's more time just flies by. Often a lengthy procedure seems like minutes and you feel to be soon on your way home. The best thing about it is the Midazolam we use has the property of making you forget most things while you are sedated. Of course it will not make you forget anything before the sedation, so don't worry about that.

It is important that you bring a chaperone as you will still be partly sedated for the remainder of the day and someone will need to look after you at home as well as making sure you get home safely.

Sedation may not be suitable for everyone but if you are reasonably fit and well then sedation is usually possible. Why not call in to see us and ask, or get your own dentist to refer you for treatment.
